

# PROJECT BRIEF

## CBS STUDIOS

Washington D.C. Bureau

**Project Type:**  
Commercial

**Application:**  
Underlayment

**Location:**  
Washington, DC

**Project Dates:**  
October 19-20, 2017

**Project Size:**  
2,000 sq. ft.

**Project Owner:**  
CBS

**Contractors:**  
Hyde Concrete

**Products:**  
TRU® Self-Leveling, TXP™ Fast Epoxy Primer

CBS News Washington Bureau has long occupied 2020 M St. NW, but in 2015, the existing building was deemed too dated to support the company's modern technological needs. Developer Tishman Speyer purchased the building, along with adjacent property 2030 M St. NW, and began redevelopment of the site to house a new, state-of-the-art commercial complex.

Renovations to existing spaces required a fast, high-quality underlayment for finish flooring. The area was laser-surveyed in order to meet requirements that the final surface be extremely flat. TRU® Self-Leveling and TXP™ Fast Epoxy Primer were supplied in pallets and used on 2,000 square feet of floor space. Hippo mixers were used to mix the TRU Self-Leveling, a gauge rake was used to place the material, and surfaces were finished using spiked rollers.
