

## PROJECT BRIEF

# NIKE FACTORY STORE GETS A MAKEOVER WITH A NEW LOOKING FLOOR

**Project Type:**

Retail

**Application:**

Polishable Concrete Overlay

**Location:**

Napa Premium Outlets in Napa, CA

**Project Dates:**

June 8 – 24, 2017

**Project Owner:**

Nike

**Contractor:**

JF Concrete Restoration Inc.

**Project Size:**

18,000 sq. ft.

**Product:**

Rapid Set® TRU® PC Polished Concrete,  
TXP™ Fast Epoxy Primer, TRU® PC Spiked Roller

The specification requirements called for a 1,500-grit polish with a light salt and pepper look. The challenge was making sure to get even exposure of the aggregate on the first cut before moving forward.

TXP Fast Epoxy Primer was used to wet the substrate, so TRU PC would adhere to the concrete floor. Then TRU PC was mixed in Hippo mixers, placed at 3/8", and finished using a gauge rake and roller. Diamatic grinders along with Ameripolish chemicals and dye were also used.

In the end, the crew was able to overlay an older floor to make it look like new, rather than resorting to a full removal and repour. The TRU PC overlay was polished in 1 day. The alternative would have required demolition of the existing floor and waiting 28 days prior to polishing.
