

PROJECT BRIEF

THE NORTHLAND

Project Type:

Commercial

Application:

Repair and patching of tilt-up panels

Location:

Kansas City, MO

Project Date:

May 10, 2017

Contractors:

Vee-Jay Cement Contracting Company;
Salazar Brothers Construction

Project Size:

180,000 sq. ft.

Products:

Rapid Set® Mortar Mix, WunderFixx®

Vee-Jay Cement Contracting Company does concrete construction work nationwide and one of their specialties is tilt-up construction. Tilt-up panels routinely require patching prior to painting because the construction method results in pinholes and other imperfections in the raised panels. Vee-Jay and subcontractor Salazar Brothers patched a new tilt-up structure located near downtown Kansas City, just north of the Missouri River in a region known to locals as Northland.

180,000 square feet of wall panels were completed with Mortar Mix used on the major repair work and WunderFixx used to patch the minor blemishes. Both products were mixed by hand and finished using trowels. The repaired areas blended well with the walls, and allowed for surfaces to be easily painted.
