Vertical and horizontal patching and spall repairs

Location:

Tucson, AZ

Project Dates:

April 26 – October 4, 2018

Project Owner:

University of Arizona

Contractor:

OC Contracting Services

Products:

Rapid Set® Mortar Mix, Mortar Mix Plus, WunderFixx®

Major renovations began at the University of Arizona's Wildcat Football Stadium in 2018. The initial phase of work was performed on the east side of the stadium, with alterations being done on the ground level concourse (including new concession areas and restrooms), the student seating area and the southeast entrance. The goal was to give students and guests an improved experience by the start of the 2018 football season.

Four hundred and sixty bags of Mortar Mix, Mortar Mix Plus and WunderFixx were used for vertical and horizontal patching and spall repairs. All products used were required to conform to the State of Arizona specifications and requirements. Concrete was water cured and steel trowels were used for finish work.

Contractors had to perform work in hot temperatures ranging from 95 to 112 degrees. The crew started working as early in the day as possible and extra water and ice were on hand to manage the concrete curing.
