Contractor:

D.A. Pope

Project Size:

120,000 sq. ft.

Products:

Rapid Set® TRU® PC Polished Concrete,
TXP™ Fast Epoxy Primer, TRU® PC Spiked Roller

Retail environments must stand up to foot traffic and endure having heavy shelving and other objects moved across floor surfaces. Perhaps no modern retailer experiences more traffic and through-put than Walmart. For their Jacksonville, Florida location, Walmart enhanced and protected the store floor with 12,000 bags of TRU PC Polished Concrete as well as TXP Fast Epoxy Primer.

TRU PC Polished Concrete was mixed with a Collomix LevMix mixer to create a lump-free, residue-free mixture. TRU PC was placed with a gauge rake and finished with spiked rollers. Polishing was performed using a SASE polishing system. The completed overlay provides a glossy, durable surface that reflects light and makes the space brighter.
